VRA AKUSE INVENTORY & REQUISITIONS PORTAL

Simple Step-by-Step Guide for Team & Management Presentation

Yo bro! Here's a clean, straightforward guide explaining how the entire VRA Akuse Stores & Inventory system works. No complicated tech talk—just plain English so you or anyone presenting the prototype can explain it to the bosses and colleagues easily. Everything is live at: **https://vra-akuse-inventory.vercel.app**

1. What Is This System and Why Do We Need It?

At VRA Akuse (Kpong Generating Station), technicians and engineers constantly need spare parts, lubricants, toner, safety gear, and test meters from the warehouse. Previously, this meant paper chits, handwritten SIV logbooks, and running around looking for supervisors to sign paper forms. Paper gets lost, people forget who borrowed which multimeter, and store officers don't know items are out of stock until someone physically checks the shelf.

This system fixes that completely: Everything is done digitally in 3 simple steps: **Request** → **Supervisor Approves** → **Store Officer Issues.** Plus, every voucher produces an official VRA Stores Issue Voucher (SIV) PDF with a unique voucher number, tracking timestamps, and digital stamp.

2. The Three User Roles (Who Does What?)

The system has 3 distinct levels of access. When presenting, you can show each one:

Role	Who It Represents	What They Can Do in the App
STAFF	Any technician, engineer, nurse, or officer in any department (e.g. Electrical, Mechanical, Control Room, Hospital).	Browses available catalog stock, submits new requisitions (SIV) with a reason, tracks their requests, and downloads their approved vouchers.
SUPERVISOR	Heads of Department (e.g. Ing. Mensah-Bonsu for MIS, Ing. Samuel Tetteh for Electrical).	Reviews pending requisitions from their staff, clicks **Approve** or **Decline** (with feedback remarks), monitors low-stock alerts, and tracks all departmental spending.
STORE OFFICER (NSS)	The warehouse personnel managing physical stores (e.g. Kelvin Osei-Tutu or Bright Agyapong).	Checks vouchers presented by staff, clicks **Issue Stock** to deduct inventory, receives incoming restock shipments (SRV), and checks in returned tools.

3. How to Log In (Show This First in the Presentation)

Open **https://vra-akuse-inventory.vercel.app**. You'll see a clean, professional VRA login screen:

• **Staff vs Supervisor Toggle:** At the top of the login card, there are two tabs. Clicking **Staff** prepares you to log in as a field technician. Clicking **Supervisor** switches you to supervisor/admin mode.
• **Quick Demo Selector:** At the bottom of the login card, there is a handy dropdown: *'Quick demo account'*. You can just pick any person (e.g. **Ing. Kwesi Mensah-Bonsu (MIS Supervisor)** or **Michael Teye Narh (Control Room Staff)**) and it auto-fills everything!
• **Default Password:** For every account in this prototype, the password is simply **vra123**.

4. Step-by-Step Walkthrough of the Main Workflows

Workflow A: How a Staff Member Requests an Item (SIV)

1. Log in as a Staff member (e.g. **Michael Teye Narh**).
2. Click the blue **'+ New Requisition'** button (at top right).
3. A clean popup appears dead-center on the screen. Select the item you need (e.g. *HP LaserJet 85A Toner*).
4. Enter quantity and a clear reason (e.g. *'Replacement cartridge for Control Room shift log printer'*).
5. If it is a tool that must be returned (like a Fluke multimeter or laptop), check the *'Returnable asset loan'* box and choose the return date.
6. Click **Submit Requisition**. The request now shows with badge **[■ Pending Approval]**.

Workflow B: How the Supervisor Approves the Request

1. Switch accounts and log in as the Supervisor (e.g. **Ing. Kwesi Mensah-Bonsu**).
2. On the Overview screen, under *'Pending Approval'*, the supervisor immediately sees the request.
3. The supervisor reads the reason. With just one click on the dark **Approve** button, the voucher status changes to **[✓ Approved]**.
4. (If the request is unnecessary or excessive, the supervisor can decline it and leave a note explaining why).

Workflow C: How the Store Officer Issues Stock & Generates the PDF

1. Log in as the Store Officer (e.g. **Kelvin Osei-Tutu - NSS**).
2. The Store Officer goes to **Requisitions** → *'Ready for Issue'*.
3. The technician comes to the store counter. The Store Officer hands over the item and clicks **Issue Stock**.
4. The system automatically subtracts the quantity from the store balance.
5. Click **Voucher** to view the official **Stores Issue Voucher (SIV)**. Click **Print / Save SIV (PDF)**. It automatically saves with the standard name: *VRA_Akuse_SIV-AK-2026-0001_OPS_Michael_Teye_Narh.pdf*.

Workflow D: Receiving New Stock into Store (SRV - Waybill Restock)

1. When a truck or delivery arrives from VRA Central Stores (Tema) or a supplier, go to **Inventory Catalog**.
2. Click **+ Receive Stock (SRV)**.
3. Pick the item, enter the Waybill number (e.g. *SRV-AK-2026-0092*), the quantity received, and supplier name.
4. Click **Record SRV**. The store balance increases immediately and is logged in the permanent audit ledger.

Workflow E: Borrowed Equipment & Tool Returns

Whenever returnable tools (e.g. Fluke Multimeters, Network Testers, Torque Wrenches) are issued, they stay visible right on the main dashboard under **Checked-Out Returnable Assets**. When the technician brings the tool back to the store, the Store Officer clicks **Check in**, and the tool is marked as returned.

5. Top Tips for Presenting the Prototype to Management

1. Start on Mobile First	Open the link on your phone. Show how responsive it is. Tap **+ New Requisition** or **+ Register Personnel** to prove that the popup centers immediately on mobile without scrolling.
2. Demonstrate Live 1-Click Approval	Submit a requisition as Staff, log in as Supervisor, and click **Approve**. Then show how the NSS Store Officer clicks **Issue Stock**. That live 3-step lifecycle always blows executives away.
3. Download the PDF Voucher	Open any issued voucher and hit **Print / Save SIV (PDF)**. Show the clean VRA letterhead, item classification, authorization signatures, and auto-generated filename.
4. Highlight Audit & Accountability	Point out that every transaction logs who did it, exact timestamp, department, and work order reference. Nothing leaves the store 'off the record'.

All the best with the presentation bro! Everything is solid, tested, and live at https://vra-akuse-inventory.vercel.app
